Absatz	Anforderungen-Prüfungen	Messergebnisse-Bemerkungen	Bewertung
Clause	*Requirements-Tests*	*Measuring results-Remarks*	*Evaluation*

1	**Anwendungsbereich** ***Scope***		
	Diese DIN-VDE-Vornorm dient dem Nachweis der elektrischen Eigenschaften von Erzeugungseinheiten (EZE) nach der VDE-AR N 4105:2018-11 und gegebenenfalls anderen Netzanschlussbedingungen. *This DIN VDE preliminary standard serves to verify the electrical properties of power generation units (PGU) in accordance with VDE-AR N 4105:2018-11 and, if applicable, other grid connection conditions.*		
2	**Normative Verweise** ***Normative References***		
3	**Begriffe und Abkürzungen** ***Terms and abbreviations***		
4	**Anforderungen an die Messgeräte und den Prüfstand** ***Requirements for the measuring instruments and the test bench***		
	In diesem Abschnitt werden allgemeine Anforderungen an Messungen und Messequipment definiert. Abweichende, testspezifische Anforderungen sind den einzelnen Abschnitten des jeweiligen Tests zu entnehmen. *This section defines general requirements for measurements and measurement equipment. Deviating, test-specific requirements can be found in the individual sections of each test.*		P ☒ F ☐ N/A ☐ N/T ☐
5	**Prüfungen** ***Tests***		
5.1	**Allgemeines** ***General information***		
	Bei Vollumrichterbasierten EZE und hinreichend realistischer Nachbildung der elektrischen Energiequelle dürfen die Messungen auch lediglich am Umrichter und den relevanten Komponenten durchgeführt werden. *In the case of full converter-based PGU and sufficiently realistic simulation of the electrical energy source, the measurements may only be carried out on the converter and the relevant components.*		
5.2	**Nachweis zulässiger Netzrückwirkungen** ***Verification of permissible network pertubations***		
	Dieser Abschnitt dient dem Nachweis der Anforderungen der VDE AR N 4105:2018-11, 5.4. Diese verweist bzgl. der Netzrückwirkungen auf die VDE-AR-N 4100:2019-04, 5.4. *This section serves as proof of the requirements of VDE AR N 4105:2018-11, 5.4, which refers to VDE-AR-N 4100:2019-04, 5.4 with regard to network perturbations.*		
5.2.1	**Allgemeines** ***General information***		

Absatz	Anforderungen-Prüfungen	Messergebnisse-Bemerkungen	Bewertung
Clause	*Requirements-Tests*	*Measuring results-Remarks*	*Evaluation*

	Netzrückwirkungen im Sinne dieses Dokumentes nach VDE-AR-N 4100:2019-04, 5.4 sind: – schnelle Spannungsänderungen; – Flicker; – Oberschwingungen, Zwischenharmonische und Supraharmonische (Höhere Frequenzen von 2 bis 9 kHz); – Kommutierungseinbrüche; – Einspeisung von Gleichströmen. *Network perturbations within the meaning of this document according to VDE-AR-N 4100:2019-04, 5.4:* *- Fast voltage changes;* *- Flicker;* *- Harmonics, interharmonics and supraharmonics (higher frequencies from 2 to 9 kHz);* *- Commutation dips;* *- Feed-in of direct currents.*		
5.2.2	**Schnelle Spannungsänderungen** ***Rapid voltage changes***		
	Diese Prüfungen dienen dem Nachweis der Anforderungen der VDE-AR-N 4100:2019-04. *These tests serve as proof of the requirements of VDE-AR-N 4100:2019-04.*	See appendix for detail.	P ☒ F ☐ N/A ☐ N/T ☐
5.2.3	**Flicker** ***Flicker***		
	Diese Prüfungen dienen dem Nachweis der Anforderungen der VDE-AR-N 4100:2019-04. *These tests serve as proof of the requirements of VDE-AR-N 4100:2019-04.*	See appendix for detail.	P ☒ F ☐ N/A ☐ N/T ☐
5.2.4	**Oberschwingungen und Zwischenharmonische** ***Harmonics and interharmonics***		
	Diese Prüfungen dienen dem Nachweis der Anforderungen der VDE AR N 4100:2019-04. Ziel der Prüfung ist es, die Ströme der Oberschwingungen, der Zwischenharmonischen und der Supraharmonischen (zwischen 2 kHz und 9 kHz) zu bestimmen. *These tests serve as proof of the requirements of VDE AR N 4100:2019-04.* *The aim of the test is to determine the currents of the harmonics, the interharmonics and the supraharmonics (between 2 kHz and 9 kHz).*	See appendix for detail.	P ☒ F ☐ N/A ☐ N/T ☐
5.2.5	**Kommutierungseinbrüche** ***Communication notches***		

Absatz	Anforderungen-Prüfungen	Messergebnisse-Bemerkungen	Bewertung
Clause	*Requirements-Tests*	*Measuring results-Remarks*	*Evaluation*
	Diese Prüfung dient der Ermittlung der Kommutierungsströme, die zur projektspezifischen Ermittlung und Beurteilung der Kommutierungsspannungseinbrüche nach VDE-AR-N 4100:2019-04, 5.4.4.4 unter Berücksichtigung der Kurzschlussleistung am Verknüpfungspunkt erforderlich ist. Diese Prüfung ist nur für netzgeführte Umrichter erforderlich. *This test serves to determine the commutation currents required for the project-specific determination and assessment of the commutation voltage dips according to VDE-AR-N 4100:2019-04, 5.4.4.4 under consideration of the short-circuit power at the connection point.* *This test is only required for line-commutated inverters.*	See appendix for detail.	P ☒ F ☐ N/A ☐ N/T ☐
5.2.6	**Einspeisung von Gleichströmen** ***Feed-in of direct currents***		
	Diese Prüfungen dienen dem Nachweis der Anforderungen der VDE AR N 4100:2019-04. Ziel der Prüfung ist es nachzuweisen, dass keine unzulässigen Gleichstromanteile in das Niederspannungsnetz eingespeist werden. Diese Prüfung ist nur für Umrichter erforderlich. *These tests serve as proof of the requirements of VDE AR N 4100:2019-04.* *The aim of the test is to prove that no inadmissible direct current components are fed into the low-voltage network.* *This test is only required for inverters.*	See appendix for detail.	P ☒ F ☐ N/A ☐ N/T ☐
5.3	**Nachweis des Symmetrieverhaltens von Umrichtern** ***Verification of the symmetry behaviour of inverters***		
5.3.1	**Allgemeines** ***General information***		
	Diese Prüfungen dienen dem Nachweis der Anforderungen der VDE AR N 4100:2019-04, 5.5. Diese Prüfungen gelten nicht für rotierende Generatoren, die direkt an das Verteilnetz angeschlossen sind. *These tests serve as proof of the requirements of VDE AR N 4100:2019-04, 5.5.* *These tests do not apply to rotating generators connected directly to the distribution network.*	Single phase product ≤4.6kVA	P ☐ F ☐ N/A ☒ N/T ☐
5.4	**Nachweis des Verhaltens der Erzeugungseinheit am Netz** ***Proof of the behaviour of the power generation unit on the grid***		

Absatz	Anforderungen-Prüfungen	Messergebnisse-Bemerkungen	Bewertung
Clause	*Requirements-Tests*	*Measuring results-Remarks*	*Evaluation*

5.4.1	**Allgemeines** ***General information***		
	Diese Prüfungen dienen dem Nachweis des einstellbaren Blindleistungsbereiches nach Anforderungen der VDE-AR-N 4105:2018-11(Kap. 5.7.2.2), sowie zur Ermittlung der Werte für SEmax und PEmax. Die RoCoF Anforderungen aus der VDE-AR-N 4105:2018-11, 5.7.1 sind nicht Teil der Einheitenzertifizierung. *These tests serve to verify the adjustable reactive power range in accordance with the requirements of VDE-AR-N 4105:2018-11 (Section 5.7.2.2) and to determine the values for SEmax and PEmax.* *The RoCoF requirements from VDE-AR-N 4105:2018-11, 5.7.1 are not part of the unit certification.*	See appendix for detail.	P ☒ F ☐ N/A ☐ N/T ☐
5.4.2	**Messung des Wirk- und Blindleistungsbereiches** ***Measurement of active and reactive power range***		
	Diese Prüfungen dienen dem Nachweis des einstellbaren Blindleistungsbereiches nach Anforderungen der VDE-AR-N 4105:2018-11(Kap. 5.7.2.2), sowie zur Ermittlung der Werte für SEmax und PEmax. Die RoCoF Anforderungen aus der VDE-AR-N 4105:2018-11, 5.7.1 sind nicht Teil der Einheitenzertifizierung. *These tests serve to verify the adjustable reactive power range in accordance with the requirements of VDE-AR-N 4105:2018-11 (Section 5.7.2.2) and to determine the values for SEmax and PEmax.* *The RoCoF requirements from VDE-AR-N 4105:2018-11, 5.7.1 are not part of the unit certification.*	See appendix for detail.	P ☒ F ☐ N/A ☐ N/T ☐
5.4.3	**Wirkleistungsreduktion durch Sollwertvorgabe** ***Active power reduction by setpoint input***		

Absatz	Anforderungen-Prüfungen	Messergebnisse-Bemerkungen	Bewertung
Clause	*Requirements-Tests*	*Measuring results-Remarks*	*Evaluation*
	Für EZE, welche nach VDE-AR-N 4105:2018-11, 5.7.4.2.1 am Einspeisemanagement/Netzsicherheits-management teilnehmen müssen, sowie EZE, welche laut Herstellerangaben am Einspeise-management/Netzsicherheitsmanagement teilnehmen können, gelten nachstehende Prüfungen. Die Messungen sind, wenn technisch möglich, bei einer Vorgabe des Verschiebungsfaktors von 1 durch-zuführen. *The following tests apply to PGU, which according to VDE-AR-N 4105:2018-11, 5.7.4.2.1 must participate in feed-in management/grid safety management, and EZE, which according to the manufacturer's specifications can participate in feed-in management/grid safety management.* *If technically possible, the measurements must be carried out with a default shift factor of 1.*	See appendix for detail.	P ☒ F ☐ N/A ☐ N/T ☐
5.4.4	**Wirkleistungseinspeisung von EZE bei Überfrequenz** ***Active power input from PGU at overfrequency***		
	Die Prüfung dient dem Nachweis der Wirkleistungsreduktion der EZE bei Überfrequenz nach VDE-AR-N 4105:2018-11 5.7.4.3. sowie dem Nachweis des Wirkleistungsgradienten nach Wiederzuschalten nach VDE-AR-N 4105:2018-11, 8.3.1. Falls einstellbar, ist die Prüfung zur Vergleichbarkeit mit einer cos(φ) Vorgabe von 1 durchzuführen. *The test serves to prove the active power reduction of the PGU at overfrequency according to VDE-AR-N 4105:2018-11 5.7.4.3. as well as to prove the efficiency gradient after reconnection according to VDE-AR-N 4105:2018-11, 8.3.1. If adjustable, the test shall be carried out with a cos(φ) specification of 1 for comparability.*	See appendix for detail.	P ☒ F ☐ N/A ☐ N/T ☐
5.4.5	**Wirkleistungseinspeisung von Speichern bei Überfrequenz** ***Active power input from energy storage systems at overfrequency***		

Absatz	Anforderungen-Prüfungen	Messergebnisse-Bemerkungen	Bewertung
Clause	*Requirements-Tests*	*Measuring results-Remarks*	*Evaluation*
	Die Prüfung dient dem Nachweis der Wirkleistungsreduktion des Speichers bei Überfrequenz nach VDE-AR-N 4105:2018-115.7.4.3, sowie dem Nachweis des Wirkleistungsgradienten nach Wiederzuschalten nach VDE-AR-N 4105:2018-11, 8.3.1. Falls einstellbar, ist die Prüfung zur Vergleichbarkeit mit einer cos(φ) Vorgabe von 1 durchzuführen *The test serves to verify the active power reduction of the storage in the event of overfrequency in accordance with VDE-AR-N 4105:2018-115.7.4.3, as well as the verification of the efficiency gradient after reconnection in accordance with VDE-AR-N 4105:2018-11, 8.3.1. If adjustable, the test shall be carried out with a cos(φ) specification of 1 for comparability.*		P ☐ F ☐ N/A ☒ N/T ☐
5.4.6	**Wirkleistungseinspeisung für EZE bei Unterfrequenz** ***Active power supply for PGU at low frequency***		
	Die Prüfung dient dem Nachweis der Wirkleistungserhöhung der EZE bei Unterfrequenz nach VDE-AR-N 4105:2018-11 5.7.4.3 sowie dem Nachweis des Wirkleistungsgradienten nach Wiederzuschalten nach VDE-AR-N 4105:2018-11, 8.3.1. Falls einstellbar, ist die Prüfung zur Vergleichbarkeit mit einer cos(φ) Vorgabe von 1 durchzuführen. *The test serves to verify the increase in active power of the PGU at underfrequency according to VDE-AR-N 4105:2018-11 5.7.4.3 as well as the verification of the efficiency gradient after reconnection according to VDE-AR-N 4105:2018-11, 8.3.1. If adjustable, the test shall be carried out for comparability with a cos(φ) specification of 1.*	See appendix for detail.	P ☒ F ☐ N/A ☐ N/T ☐
5.4.7	**Wirkleistungseinspeisung von Speichern bei Unterfrequenz** ***Active power input from energy storage systems at underfrequency***		

Absatz	Anforderungen-Prüfungen	Messergebnisse-Bemerkungen	Bewertung
Clause	*Requirements-Tests*	*Measuring results-Remarks*	*Evaluation*
	Die Prüfung dient dem Nachweis der Wirkleistungserhöhung des Speichers bei Unterfrequenz nach VDE-AR-N 4105:2018-11 5.7.4.3. sowie dem Nachweis des Wirkleistungsgradienten nach Wiederzuschalten nach VDE-AR-N 4105:2018-11, 8.3.1. Falls einstellbar, ist die Prüfung zur Vergleichbarkeit mit einer cos(φ) Vorgabe von 1 durchzuführen. Die Prüfungen sind unter Verwendung einer Schnittstelle zur Wirkleistungsreduzierung durchzuführen, die geringer priorisiert ist als die Wirkleistungseinspeisung bei Unterfrequenz (Details sind in Abschnitt 8.1 der VDE-AR-N 4105:2018-11 gegeben). Ist eine solche Schnittstelle nicht vorhanden, ist dies zu dokumentieren und die Prüfung entfällt. *The purpose of the test is to verify the increase in active power of the energy storage system at underfrequency in accordance with VDE-AR-N 4105:2018-11 5.7.4.3. and to verify the efficiency gradient after reconnection in accordance with VDE-AR-N 4105:2018-11, 8.3.1. If adjustable, the test shall be performed for comparability with a cos(φ) specification of 1.* *The tests shall be performed using an interface for active power reduction which has a lower priority than the active power input at low frequency (details are given in Section 8.1 of VDE-AR-N 4105:2018-11). If such an interface is not available, this shall be documented and the test shall be omitted.*	DC coupled energy storage inverter.	P ☐ F ☐ N/A ☒ N/T ☐
5.4.8	**Statische Spannunshaltung / Blindleistungsbereitstellung** ***Static voltage holding / reactive power supply***		
	Die Prüfung dient dem Nachweis der Blindleistungsfahrweise nach VDE-AR-N 4105:2018-11, 5.7.2 der EZE im Normalbetrieb. Alle Prüfungen sind bei den jeweils angegebenen Spannungen durchzuführen. Wenn Prüfstandmessungen nicht möglich sind, ist eine technisch begründete Erklärung des Herstellers vorzulegen. Bei Anlagen, die über Wechselrichter an das Netz angeschlossen werden, darf der Wechselrichter alleine geprüft werden. *The test serves as proof of reactive power operation according to VDE-AR-N 4105:2018-11, 5.7.2 of the PGU in normal operation.* *All tests must be carried out at the specified voltages. If test bench measurements are not possible, a technically justified declaration by the manufacturer shall be submitted. For systems which are connected to the grid via inverters, the inverter may be tested alone.*	See appendix for detail.	P ☒ F ☐ N/A ☐ N/T ☐

Absatz	Anforderungen-Prüfungen	Messergebnisse-Bemerkungen	Bewertung
Clause	*Requirements-Tests*	*Measuring results-Remarks*	*Evaluation*
5.4.8.1	**Prüfungen der Blindleistungs/Verschiebungsfaktor Einstellgenauigkeit** ***Reactive power/displacement factor tests setting accuracy***		
	Die Messungen sind bei 0,9 Un, Un und 1,1 Un mit einer Toleranz von ± 2 % Un durchzuführen. Die Einschränkungen der spannungsabhängigen Blindleistungsstellbereiche laut VDE-AR-N 4105:2018-11, Bild 2 – 4, sind zu berücksichtigen. *Measurements shall be made at 0,9 Un, Un and 1,1 Un with a tolerance of ± 2 % Un.* *The restrictions of the voltage-dependent reactive power control ranges according to VDE-AR-N 4105:2018-11, Figs. 2 - 4, must be taken into account.*	See appendix for detail.	P ☒ F ☐ N/A ☐ N/T ☐
5.4.8.2	**Prüfung der Verschiebungsfaktor-/Wirkleistungskennlinie cos (P)** ***Testing the displacement factor/effective power characteristic curve cos (P)***		
	Dieser Abschnitt dient der Überprüfung der in VDE-AR-N 4105:2018-11, 5.7.2.4 b) dargestellten Standardkennlinie für cos (P). Die Blindleistungsregelung für dieses Kennlinienverfahren ist hinsichtlich stationärer Genauigkeit und Dynamik zu beurteilen. *This section serves to check the standard characteristic curve for cos (P) shown in VDE-AR-N 4105:2018-11, 5.7.2.4 b).* *The reactive power control for this characteristic curve method shall be evaluated with regard to steady-state accuracy and dynamics.*	See appendix for detail.	P ☒ F ☐ N/A ☐ N/T ☐
5.4.8.3	**Prüfung der Blindleistungs-Spannungskennlinie Q(U)** ***Testing the reactive power voltage characteristic Q(U)***		
	Die Überprüfung der Q(U)-Regelung nach VDE-AR-N 4105:2018-05, 5.7.2.4 ist in zwei Teilprüfungen geteilt, sodass einerseits die Genauigkeit und andererseits die Dynamik der Q(U)-Regelung geprüft wird. *The verification of the Q(U) control according to VDE-AR-N 4105:2018-05, 5.7.2.4 is divided into two partial tests, so that on the one hand the accuracy and on the other hand the dynamics of the Q(U) control are checked.*	Q(U) function is not required per requirements in VDE-AR-N 4105/11.18	P ☐ F ☐ N/A ☒ N/T ☐
5.5	**Nachweise des NA-Schutzes** ***Proof of NS-protection***		
5.5.1	**Allgemeines** ***General information***		

Absatz	Anforderungen-Prüfungen	Messergebnisse-Bemerkungen	Bewertung
Clause	*Requirements-Tests*	*Measuring results-Remarks*	*Evaluation*
	Diese Prüfungen dienen dem Nachweis der Anforderungen der VDE AR N 4105:2018-11, Abschnitt 6. *These tests serve as proof of the requirements of VDE AR N 4105:2018-11, Section 6.*		P ☒ F ☐ N/A ☐ N/T ☐
5.5.2	**NA-Schutz** ***NS-protection***		
	Die Prüfung auf Fehlererkennung mit nachfolgender Abschaltung erfolgt durch Fehlersimulation, gegebenenfalls mit zusätzlichen Fehlertests (siehe VDE AR N 4105:2018-11, 6.1) Für EZE, welche die Anforderungen nach DIN EN 62109 (VDE 0126-14) nachweislich erfüllen, müssen die Prüfungen nicht durchgeführt werden. Der Nachweis in Form eines Prüfberichts eines akkreditierten Prüflabors oder eines Komponentenzertifikates ist vorzulegen. *The check for fault detection with subsequent switch-off is carried out by fault simulation, if necessary with additional fault tests (see VDE AR N 4105:2018-11, 6.1).* *For PGU, which demonstrably meet the requirements of DIN EN 62109 (VDE 0126-14), the tests do not have to be carried out. Evidence in the form of a test report from an accredited test laboratory or a component certificate must be submitted.*	See appendix for detail.	P ☒ F ☐ N/A ☐ N/T ☐
5.5.3	**Zentraler NA-Schutz** ***Central NS-protection***		
	Die folgenden Prüfungen sind der Reihe nacheinander durchzuführen: – Die Hilfsspannung des NA-Schutzes wird abgeschaltet. – Die Prüfeinrichtung am NA-Schutz wird betätigt. *The following tests shall be carried out one after the other:* *- The auxiliary voltage of the NS-protection is switched off.* *- The test device on the NS-protection is actuated.*		P ☐ F ☐ N/A ☒ N/T ☐

	Der Prüfling wird an ein Netz mit nachgeschalteter Prüfeinrichtung (oder einen Netzsimulator mit nachgeschalteter Netznachbildung) angeschlossen. Diese Prüfeinrichtung muss in der Lage sein, den/die entsprechende/n Spannungseinbruche/-überhöhungen, auf der Prüflingsseite nachbilden können. Alle Anforderungen an die Prüfeinrichtungen sind im Anhang A aufgeführt.Die korrekte Parametrierung der Prüfeinrichtung, um die jeweiligen Spannungseinbrüche/-überhöhungen entsprechend Tabelle 17 und Tabelle 18 zu erhalten, ist für jeden Test durch einen Leerlaufversuch zu kontrollieren (jeweils separat symmetrisch, unsymmetrisch). Der jeweils einzustellende Wert ist für Spannungseinbrüche die jeweilig resultierende, kleinste Leiter-Neutralleiter-Spannung. Für Spannungsüberhöhungen ist der einzustellende Wert die jeweilig resultierende, auf den Nennwert bezogene, größte Leiter-Neutralleiter-Spannung. Die Tests sind dabei jeweils bei einer Spannung im Bereich von Un ± 5 % Un zu starten.Bezugspunkt für die dynamische Netzstützung der EZE oder des Speichersystems sind die netzseitigen Anschlussklemmen des Prüflings. Es ist bei Volllast (PrE ± 2 % PrE) sowie im Teillastbereich von 0,2 PrEbis 0,6 PrEzu testen. Referenzwert ist die gemessene Wirkleistung als 10-s-Mittelwert unmittelbar vor dem/der Spannungseinbruch/-überhöhung. Alle Tests 1 bis 6 aus Tabelle 17 bzw. die Tests 1 bis 7 aus Tabelle 18 müssen sowohl symmetrisch (Fehlerbild A) wie auch unsymmetrisch (gemäß Fehlerbild D) durchgeführt werden (nach Bollen, siehe Anhang). *The test object is connected to a network with downstream test equipment (or a network simulator with downstream network simulation). This test device shall be capable of simulating the corresponding voltage dip/surges as on the test item side. All requirements for the test equipment are listed in Annex A.For each test, the correct parameterization of the test equipment in order to obtain the respective voltage dips / increases in accordance with Table 17 and Table 18 shall be checked by a no-load test (each separately symmetrical, asymmetrical). For voltage dips, the value to be set in each case is the resulting smallest conductor-neutral conductor voltage. For voltage increases, the value to be set is the respective resulting largest conductor-neutral conductor voltage related to the nominal value. The tests must be started with a voltage in the range of Un ± 5 % Un.The reference point for the dynamic network support of the PGU or the storage system are the network -side terminals of the test item. It must be tested at full load (PrE ± 2 % PrE) and in the partial load range from 0.2 PrE to 0.6 PrE. The reference value is the measured active power as an average of 10 s immediately before the voltage dip/exaggeration. All tests 1 to 6 from Table 17 or tests 1 to 7 from Table 18 must be performed both symmetrically (error pattern A) and asymmetrically (according to error pattern D) (according to Bollen, see*	See appendix for detail. 6.3	**Alternative Form des FRT-Nachweises** ***Alternative form of FRT detection***

Absatz	Anforderungen-Prüfungen	Messergebnisse-Bemerkungen	Bewertung
Clause	*Requirements-Tests*	*Measuring results-Remarks*	*Evaluation*
	Standardmäßig ist der Nachweis durch Messungen zu erbringen. Eine alternative Form der Nachweisführung ist von der TAR nicht vorgesehen und auch nicht notwendig, da die fraglichen Leistungen stets direkt getestet werden können. Falls dies in begründeten Fällen dennoch nicht möglich ist, so kann der FRT-Nachweis für Typ 1 EZE alternativ per rechnerischer Simulation mit einem Synchronmaschinenmodell durchgeführt werden. Dies erfolgt unter direkter Bezugnahme auf die Festlegungen der 4110 und erfordert mindestens die folgenden Schritte: 1) Erstellung eines Anlagenzertifikates „C“ nach FGW TR8:2019-02 inklusive einem vorläufigen Simulationsmodell nach FGW TR 4:2019-02. 2) Inbetriebsetzung und Vermessung nach der EZA nach FGW TR 3:2018-09. 3) Erstellung einer erweiterten Konformitätserklärung einschließlich der Optimierung des erstellten Simulationsmodells nach FGW TR 4:2019-02. 4) Vorläufiger Betrieb der EZA unter Monitoring mit Störschreibern. Melde- und Nachbesserungspflicht bei Netzereignissen (mindestens 5 Jahre Überwachung durch die Zertifizierungsstelle). Die Hilfsaggregate der EZE sind separat auf Unter- und Überspannung zu prüfen. Die Prüfung der Hilfsaggregate ist nach Kapitel 5.9 durchzuführen. *By default, proof shall be provided by measurements. An alternative form of verification is not provided for by the TAR and is also not necessary, since the services in question can always be tested directly. If this is still not possible in justified cases, the FRT verification for type 1 PGU can alternatively be carried out by mathematical simulation with a synchronous machine model. This is done with direct reference to the specifications of the 4110 and requires at least the following steps:* *1) Creation of a plant certificate "C" according to FGW TR8:2019-02 including a preliminary simulation model according to FGW TR 4:2019-02.* *2) Commissioning and surveying after development cooperation according to FGW TR 3:2018-09.* *3) Preparation of an extended declaration of conformity including the optimisation of the simulation model according to FGW TR 4:2019-02.* *4) Provisional operation of the development cooperation under monitoring with fault recorders. Obligation to report and rectify grid events (at least 5 years monitoring by the certification body).* *The auxiliary units of the PGU must be tested separately for undervoltage and overvoltage. The auxiliary power units shall be tested in accordance with Chapter 5.9.*		P ☐ F ☐ N/A ☒ N/T ☐

A.1	**Anhang FRT (normativ)** ***Annex FRT (normative)***		
A.1.1	**Anforderungen an den Prüfstand für FRT Tests** ***Requirements for the test bench for FRT tests***		
	The generated voltage dips and voltage increases shall meet the following requirements: *- The effective mains impedance from the PGU point of view (with voltage divider principle: with connected longitudinal impedance) must meet the following criteria:* *- The short-circuit power at the PGU before and after the fault must be between 10x Sn and 30x Sn.* *- R/X 0,3 - 3 (for the impedances used in the test equipment)* *- The test equipment and, if necessary, the mains simulator must be able to conduct the maximum current of the test object both in the generator and in the motor area. The energy consumption must be designed for the occurring surge short-circuit current iP (according to IEC 60909). iP of the test types is very different. are standard values:* *- for inverter-coupled systems approx. 2.2 Ir,* *- for directly coupled asynchronous or synchronous machines approx. 7 Ir.* *- For symmetrical and asymmetrical voltage dips and voltage increases, the error form A and D as shown in Fig. 8 with the phase positions of the voltages as shown in Table 21 must be observed, taking into account the switching group effect. The diagrams show conductor-neutral conductor voltages.* *Note: In the case of a medium-voltage side, two-pole fault without ground contact (conductor-conductor voltages: fault pattern D) upstream of a Dy transformer, fault pattern D results on the undervoltage side of the transformer when the conductor-neutral conductor voltages are considered.* *- The edge steepness of the voltage must correspond to that of a circuit-breaker when a fault occurs and when a fault is declared.* *A change in the instantaneous voltage from 90 % to 10 % of the pre-fault voltage should take place within a period of max. 4 ms for UVRT.* *- The requirements for the waveform of the test voltage are to be tested within the scope of the idle tests. The test voltage must lie within the tolerances shown in Fig. 9 for voltage dip tests or in Fig. 10 for overvoltage tests.*	See appendix for detail.	P ☒ F ☐ N/A ☐ N/T ☐

A.2	**Beispiele möglicher Prüfstände für UVRT (informativ)** ***Examples of possible test benches for UVRT (informative)***		
A.2.1	**Netzsimulator** ***Network simulator***		
	Netzsimulatoren setzten sich im Wesentlichen aus einer niederohmigen Spannungsquelle sowie einer Netznachbildung zusammen, mit der dem Prüfling geeignete Impedanzen präsentiert werden können. Im Gegensatz zu Prüfeinrichtungen mit Kurzschlusszweig muss hier der Netzsimulator die zwei- und dreiphasigen Fehler nachbilden. Zum Betrieb des Prüflings wird darüber hinaus entweder eine rotierende Antriebseinheit oder eine DC- oder AC-Quelle benötigt, die die entsprechende (mechanische oder elektrische) Leistung zur Durchführung der unterschiedlichen Tests bereitstellt. Die Antriebseinheit oder Quelle muss eine Regelung aufweisen, mit der die für die Tests notwendigen stationären und dynamischen Betriebsbedingungen nachgebildet werden können. *Network simulators essentially consist of a low impedance voltage source and a network simulation with which suitable impedances can be presented to the test item. In contrast to test equipment with a short-circuit branch, the network simulator has to simulate the two-phase and three-phase faults. In addition, either a rotating drive unit or a DC or AC source is required to operate the test item, which provides the appropriate (mechanical or electrical) power to perform the various tests. The drive unit or source must have a controller that can replicate the steady-state and dynamic operating conditions required for the tests.*	See appendix for detail.	P ☒ F ☐ N/A ☐ N/T ☐
A.2.2	**Kurzschlusssimulator** ***Short-circuit simulator***		
	Ein Kurzschlusssimulator nach dem Spannungsteilerprinzip verfügt über Vor- und Kurzschlussdrossel. Die Kurzschlussdrossel wird durch den Schalter aktiviert. Dieser Schalter kann ein mechanischer Leistungsschalter oder ein elektronischer Schalter sein, wenn die Schalteigenschaften mit einem Mittelspannungsleistungsschalter vergleichbar sind. *A short-circuit simulator based on the voltage divider principle has a pre-circuit and short-circuit choke. The short-circuit choke is activated by the switch. This switch can be a mechanical circuit breaker or an electronic switch if the switching characteristics are comparable to a medium-voltage circuit breaker.*		P ☐ F ☐ N/A ☒ N/T ☐

A.3.1	**Liste von Prüfeinrichtungen** ***List of test facilities***		
	• Netzsimulator (Umrichtersystem) • Transformatorbasierte Prüfeinrichtungen (Auto- oder Bypass-Transformatorsystem) • kondensatorbasierte Prüfeinrichtung. *- Mains simulator (inverter system)* *- Transformer-based test equipment (auto- or bypass transformer system)* *- capacitor-based testing device.*	See appendix for detail.	P ☒ F ☐ N/A ☐ N/T ☐
A.3.2	**Transformatorbasierte Prüfeinrichtung** ***Transformer based test apparatus***		
	Transformatorbasierte Prüfeinrichtungen haben einen Transformator mit geeignet abgestuften Abgriffen als Basis. Durch den Wechsel auf eine andere Kombination der Abgriffe werden die Fehlerform sowie die Einbruchstiefe bestimmt. Die Einbruchsdauer wird durch eine Schalteinheit festgelegt, die zwischen den verschiedenen Abgriffen umschaltet und einen kontinuierlichen Stromfluss nach Anhang A.1.1 des Prüflings gewährleistet. *Transformer-based test facilities have a transformer with suitably graded taps as a base. By switching to a different combination of the taps, the type of fault and the burglary depth are determined. The burglary duration is determined by a switching unit which switches between the different taps and ensures a continuous current flow according to Appendix A.1.1 of the test item.*		P ☐ F ☐ N/A ☒ N/T ☐
A.3.3	**Kondensatorbasierte Prüfeinrichtung** ***Capacitor-based testing device***		

Absatz	Anforderungen-Prüfungen	Messergebnisse-Bemerkungen	Bewertung
Clause	*Requirements-Tests*	*Measuring results-Remarks*	*Evaluation*
	The example below shows a capacitor-based test setup for an overvoltage ride-through. By connecting a capacitor to a coil, a series resonant circuit can be formed which generates an overvoltage. In this way, overvoltage situations in networks (e.g. load shedding, Ferranti effect) can be realistically simulated. *As already described above for the undervoltage ride-through, the effect of the test sequence for the upstream network is limited by the resistor XSR.* *The XSR resistor should be variable and selected so that the overvoltage generated for the test does not create an undesirable situation in the upstream network and at the same time does not significantly influence the transient response of the PGU.* *A bypass for XSR (LS1) can be switched before and after the voltage rise triggered by actuating LS2.The overvoltage is triggered by connecting the resistor of CL and Rd via switch LS2.* *The values of XSR, CL and Rd should be selected so that the voltage specified for the test is generated when the test item is not connected. The values of XSR, CL and Rd as used in the test shall be specified in the test apparatus description, together with the no-load short-circuit ratio of mains and test apparatus.* *Switches LS1 and LS2 shall be used to control the duration of the voltage rise. These may, for example, be mechanical switches. If other switching devices are used, the behaviour of mechanical switches with respect to closing time and opening time is regarded as a reference to be observed.*		P ☐ F ☐ N/A ☒ N/T ☐

Possible test case verdicts:

- test case does not apply to the test object ..... : N/A
- test object was not evaluated for the requirement .... : N/E
- test object does meet the requirement ..... : Pass (P)
- test object does not meet the requirement ..... : Fail (F)

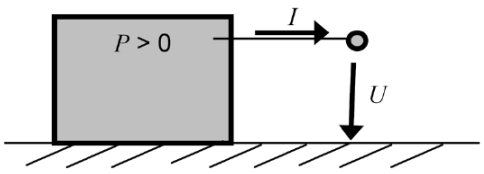
Testing:

Date of receipt of test items ..... : 04.11.2019

Date(s) of performance of tests ..... : 04.11.2019 – 15.01.2020

General remarks:

"(see Attachment #)" refers to additional information appended to the report.
"(see appended table)" refers to a table appended to the report.
The tests results presented in this report relate only to the object tested.
This report shall not be reproduced except in full without the written approval of the testing laboratory.
List of test equipment must be kept on file and available for review.
Additional test data and/or information provided in the attachments to this report.
Throughout this report a ☐ comma / ☒ point is used as the decimal separator.
Generator reference system:

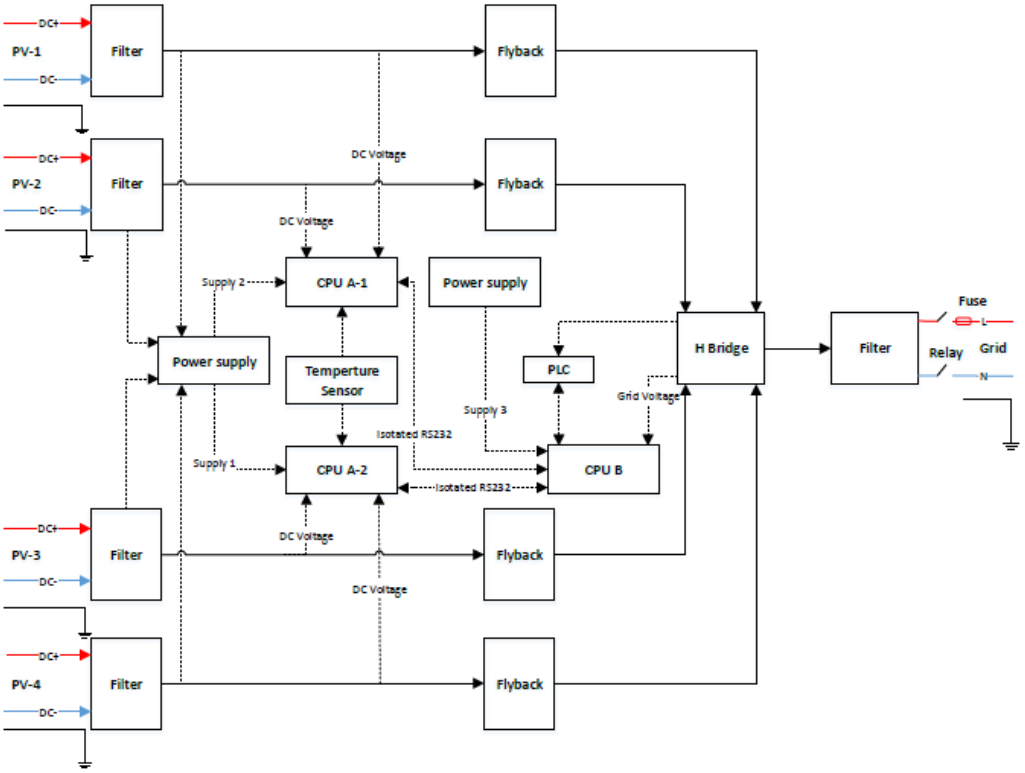


General product information:

Brief description:

The PCEs under test are single-phase grid connected micro inverter for solar power generation. The Grid-connected Inverter utilize the advanced power conversion technology IGBT to convert the DC power normally from the photovoltaic array to stable three-phase AC power and then feed the power to the utility grid. The interface protection device is comporised by a group of power relays and bridge MOSFETs since each dc input string is separated from grid by high frequency transformer.

The controlling section is also redundant built, one master CPU, and one slave CPU. In case any one of two chips breaks down or runs a wrong program, which result to the loss of protection funciton, the another chip could indicate the fault and disconnect the equipment immediately.



Block Diagram of EVT1200

Model Difference:

All series models have the same electrical character, control method and software.
Unless otherwise specified, all tests were performed on the model EVT600 to represent other family models.

Remote control:

The remote control of product is realized by power line communication technology.

The product was tested on:
Software version: v1.04

Test condition:
Temperature: 25°C
Relative humidity: 70%
